# INSTALLATION

Create /Purpletree/Storelocator/ Directory inside <Magento Root>/app/code/ directory.

Unpack the zip file inside **app/code/Purpletree/Storelocator/** directory.

Folder Structure of extension in Magento2 would be:

<Magento Root>/app/code/Purpletree/Storelocator/controller

<Magento Root>/app/code/Purpletree/Storelocator/block

From shell/command prompt, run following commands on Magento root directory:

php bin/magento setup:upgrade

# CONFIGURATION

On successful installation, a new Menu and submenu will appear in magento Admin panel with name of **Storelocator.** It will have three sub menus

- Manage Stores
- Import Stores
- Configuration

To Configure and Enable the Extension

- Go to Storelocator > Configuration.
- In "General Configuration", Set "Module Enable" to Yes.
- Now Enter License key you get with this extension in License key field. (required field)
   If you haven't received license key, please contact our support team.
- Enter Default Latitude and Default Longitude, which will be the center for store locator map in frontend. Get this from google map.(required field) More information here:

https://support.google.com/maps/answer/18539?source=gsearch&hl=en

• Enter Google Api key. Get this from google. (required field)

# Google API Key

More information about API key: https://developers.google.com/places/web-service/get-api-key

Note: Valid License Key is required to save any configuration changes. Please purchase the extension to get a valid License key. Contact our support desk if you haven't received the license key.

All options are self-explanatory and have tooltips for additional information.
