6. The callback URLs shown on this page can be added to the facebook/twitter/google app. Following are the callback URLs to be added in the respective apps:

Facebook:

<base_url>/index.php?route=account/purpletree_social_login/fblogin

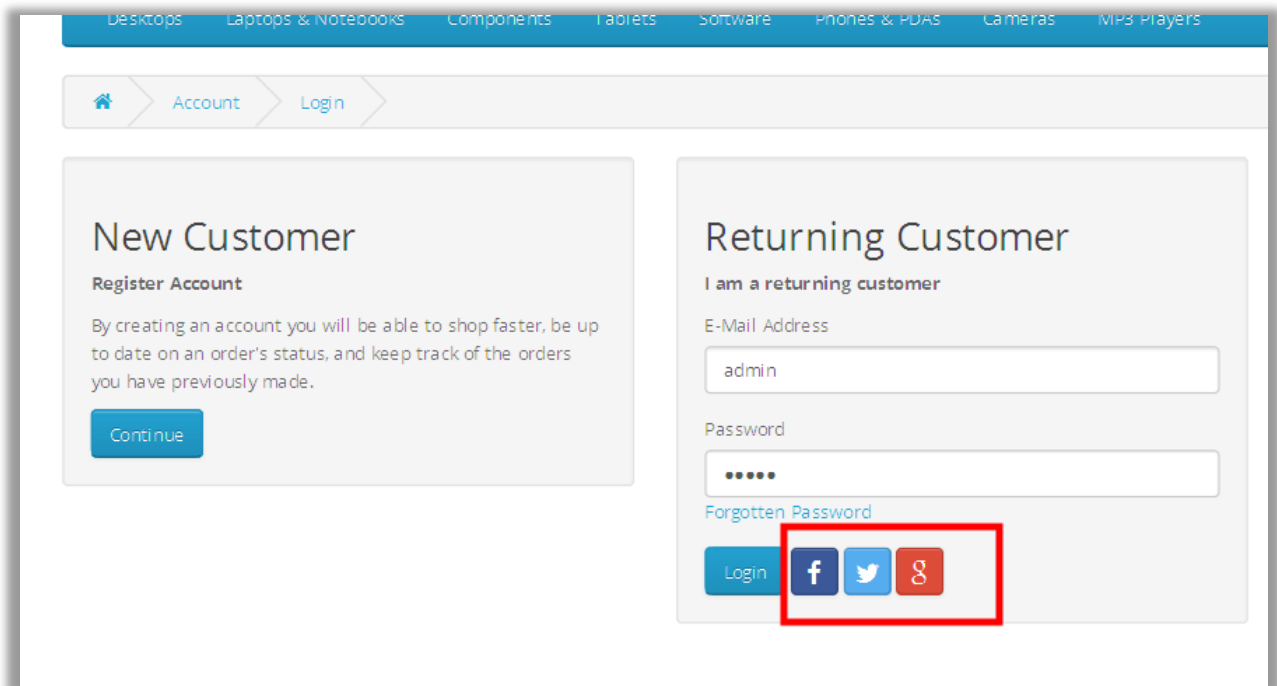

Google:

<base_url>/index.php?route=account/purpletree_social_login/googlelogin

Twitter:

<base_url>/index.php?route=account/purpletree_social_login/twitlogin

7. After creating all apps and entering the API key data in extension, social login showson login page:

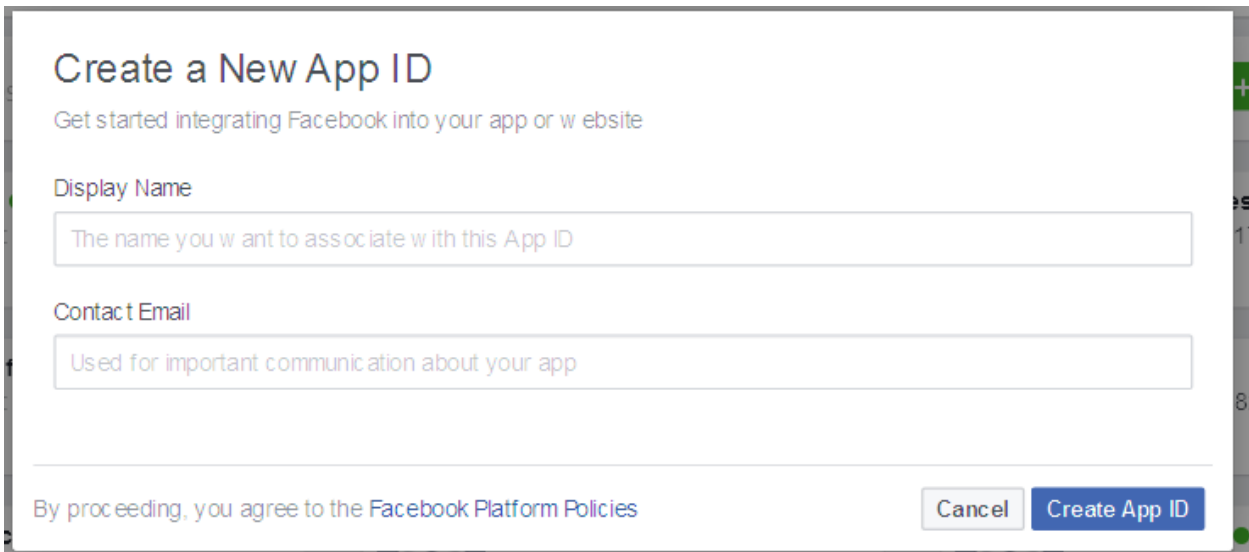

Configuring Facebook, Twitter and Google APIs

1. Add social login api key and secret for Facebook, Twitter and Google.

For getting api and secret key for facebook, twitter and google client id for google , you need to create App.

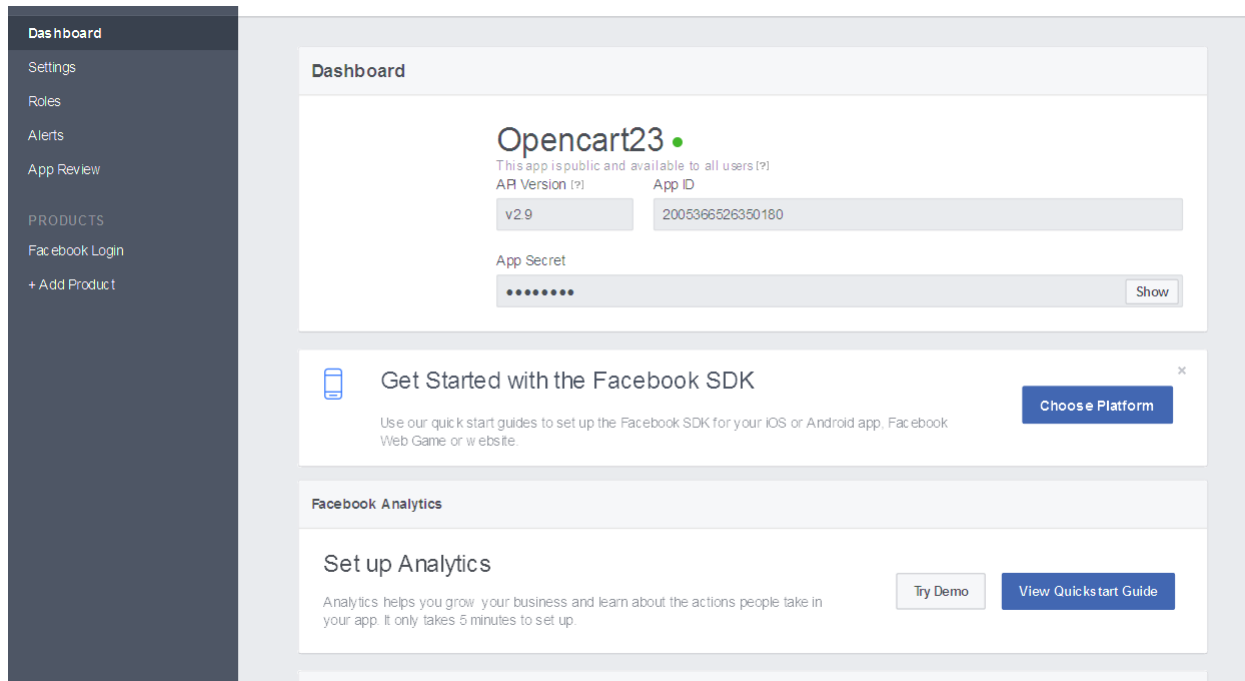

Configuring Facebook API

- Go to <https://developers.facebook.com/apps/> and log in with your Facebook account.
- Create a new Facebook apps with your desired name (like **Sitelogin**).

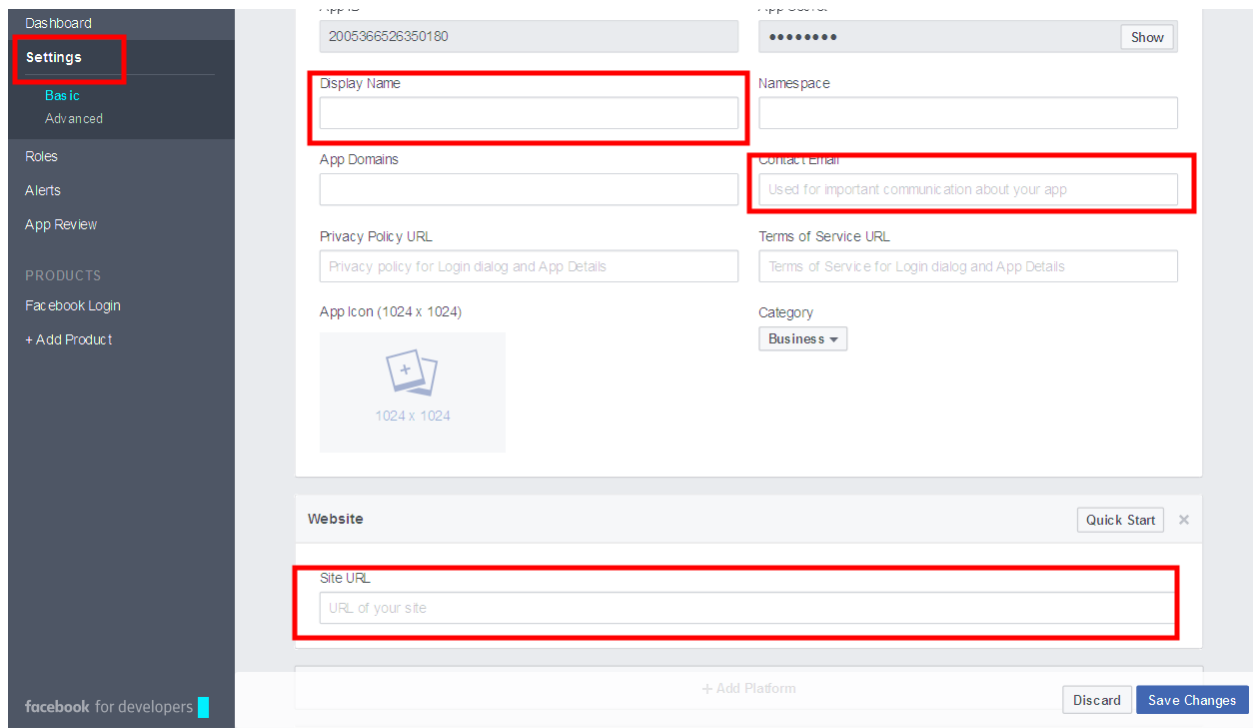

The screenshot shows the 'Create a New App ID' form on the Facebook Developer portal. The form has a title 'Create a New App ID' and a subtitle 'Get started integrating Facebook into your app or website'. It contains two input fields: 'Display Name' with the placeholder text 'The name you want to associate with this App ID' and 'Contact Email' with the placeholder text 'Used for important communication about your app'. At the bottom, there is a line of text 'By proceeding, you agree to the Facebook Platform Policies' and two buttons: 'Cancel' and 'Create App ID'.

- Once you complete all steps you see this screen.

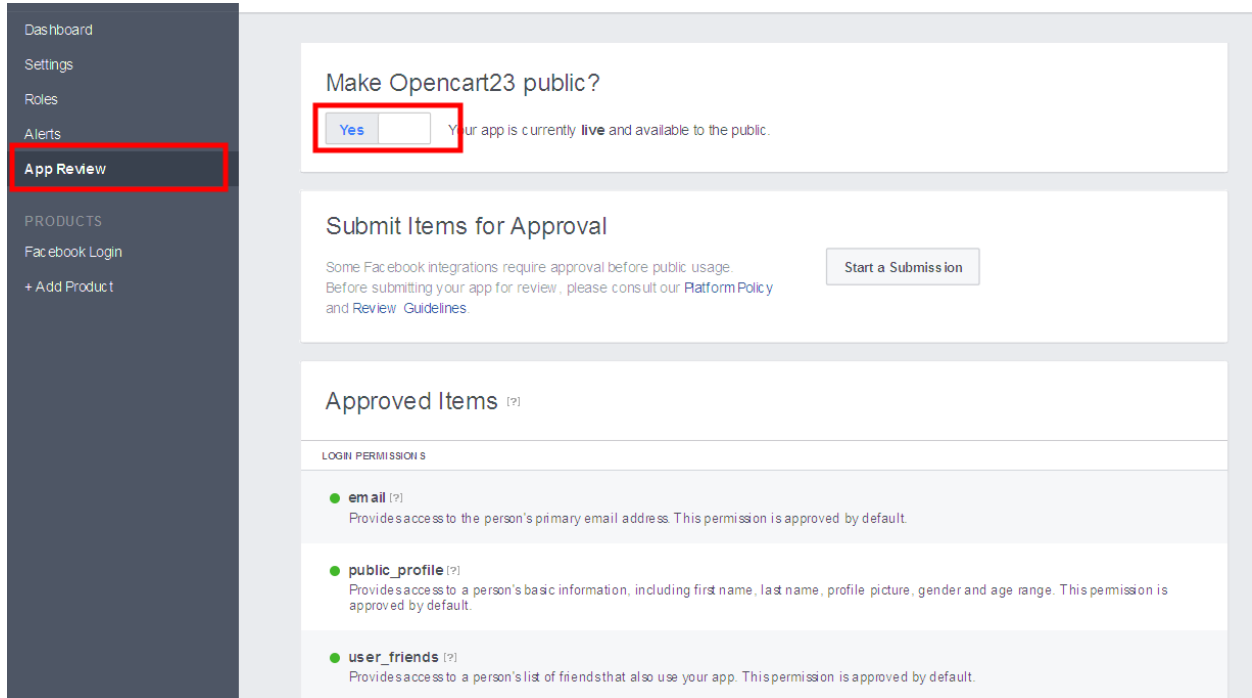

The screenshot shows the PurpleTree dashboard for an OpenCart23 app. The left sidebar contains navigation options: Dashboard, Settings, Roles, Alerts, App Review, PRODUCTS, Facebook Login, and + Add Product. The main content area displays the app name 'Opencart23' with a green dot, indicating it is public. Below this, the API Version is 'v2.9' and the App ID is '2005366526350180'. The App Secret is masked with dots and a 'Show' button is visible. A 'Get Started with the Facebook SDK' banner is present, along with a 'Facebook Analytics' section titled 'Set up Analytics'.

- Click on show button to see secret key. Enter that App id and secret key in 'Purpletree social login' extension.
- Click on setting menu to enter domain, mail id and site url and click on save changes button.

The screenshot shows the 'Settings' page for the OpenCart23 app. The left sidebar has 'Settings' highlighted in red. The main content area is divided into two columns. The left column contains: Display Name (input field, highlighted in red), App Domains (input field), Privacy Policy URL (input field with placeholder 'Privacy policy for Login dialog and App Details'), and App Icon (1024 x 1024, with a placeholder image). The right column contains: Namespace (input field), Contact Email (input field with placeholder 'Used for important communication about your app', highlighted in red), Terms of Service URL (input field with placeholder 'Terms of Service for Login dialog and App Details'), and Category (dropdown menu set to 'Business'). Below these is a 'Website' section with a 'Quick Start' button and a 'Site URL' input field (highlighted in red) with placeholder 'URL of your site'. At the bottom, there is a '+ Add Platform' button, a 'Discard' button, and a 'Save Changes' button.

- Click on 'App review' menu to enable app publicly.

Make Opencart23 public?

Yes No Your app is currently **live** and available to the public.

Submit Items for Approval

Some Facebook integrations require approval before public usage. Before submitting your app for review, please consult our [Platform Policy](#) and [Review Guidelines](#).

[Start a Submission](#)

Approved Items ^[?]

LOGIN PERMISSIONS

- **email** ^[?]
Provides access to the person's primary email address. This permission is approved by default.
- **public_profile** ^[?]
Provides access to a person's basic information, including first name, last name, profile picture, gender and age range. This permission is approved by default.
- **user_friends** ^[?]
Provides access to a person's list of friend that also use your app. This permission is approved by default.

Steps to Configure Twitter API

- Go to <https://apps.twitter.com/> and login with you Twitter account.
- [Create New App](#) with the following details.
 - Name:** Your application Name. This is shown to the user while authorizing.
 - Description:** Your application Description. This is shown to user while authorizing.
 - Website:** Your application website.
 - Callback URL(*):** After authorization, this URL is called with oauth_token.
- Change the apps permission to **Read and Write** or **Read, Write and Access direct messages**. For changing the apps permission, you need to add a mobile number to your twitter account.
- From the OAuth Settings page, you'll get the **Consumer key** and **Consumer secret**.

- For detailed guide on twitter App creation. See this link <https://www.codexworld.com/how-to-create-twitter-oauth-application/>

Note: Twitter doesn't return the user email id after authentication. To get the user's Email Address, your application needs to be whitelisted by Twitter. To get and store the user email address, follow the below steps.

- Use <https://support.twitter.com/forms/platform> to submit your request. It will take some times please be patient.
- Once whitelisted, the **Request email addresses from users** checkbox will be available under your app permission on <https://apps.twitter.com/>. Under settings, Privacy Policy URL and Terms of Service URL fields will be available. If enabled, users will be informed that your app can access their email on the OAuth dialog.

Steps to configure Google API

- Go to <https://console.developers.google.com/>
- Select an existing project, or create a new project by clicking **Create Project**:
 - In the **Project name** field, type in a name for your new project.
 - In the **Project ID** field, the console has created project ID. Optionally you can type in a project ID for your project. But project ID must be unique worldwide.
 - Click on the **Create** button and the project to be created in some seconds. Once the project is created successfully, the project name would be appearing at the top of the left sidebar.
- In the left sidebar, select APIs under the **APIs & auth** section. A list of Google APIs appears.
- Find the **Google API** service and set its status to **Enable**.
- In the sidebar, select **Credentials** under the **APIs & auth** section.
- In the **OAuth** section of the page, select **Create New Client ID**.
- Create Client ID dialog box would be appearing for choosing application type.
- In the **Application type** section of the dialog, select **Web application** and click on the **Configure consent screen** button.
- Choose **Email address**, enter the **Product name** and save the form.
- In the **Authorized JavaScript origins** field, enter your app origin. If you want to allow your app to run on different protocols, domains, or subdomains, then you can enter multiple origins.
- In the **Authorized redirect URI** field, enter the redirect URL.

- Click on **Create Client ID**.
- The Client ID for web application will be generated. Note the **Client ID** for later use that will need to use to access the APIs.
